

Environmental Contaminants

Menstrual Cycle and Ovulation Study

WOMEN NEEDED

Help us learn whether the excretion of environmental contaminants differs in the follicular versus the luteal phase of the menstrual cycle.

We invite you to join if you:

- Are between the ages of 19 and 35
- Have menstruated within the last 3 months
- Have not used “the Pill” (combined hormonal contraceptives) or other ovarian hormones within 3 months; thyroid, insulin & others like those are okay

If you responded “Yes” to all 3 - we welcome you to participate in this study!
